 Abstract

- ☐ 12. **SAIC DELIVERS FINAL TRACKING SYSTEMS TO NAVY** TX Science Applications International Corp. (SAIC) on Tuesday delivered the last two of a total of four Large Area Tracking Range (LATR) systems to the Navy. The LATR system can track and capture the movement and weapons firing information of up to 124 participants in the sea or air. Using a ground station and transponders fixed to the participant ships and planes, real-time data on direction, speed, and weaponry is made available for training purposes. Each LATR station has a 500-nautical mile effective radius. LATR is based on the Global Positioning System and is used to train Naval personnel in everything from small to fleet-level exercises. The transponder pods are small enough—designed not to reduce a ship's or plane's warfighting capability—to fit onto a AIM-9 Sidewinder launcher or easily fitted into the cabin of helicopter. Both installation and removal can be accomplished within an hour. Of the two newest systems, one is located at the Pacific De. Nov 20, 1997. Vol. 197, Iss. 35; p. 1
